PROFESSIONAL PROFILE

Backend-focused engineer (TypeScript, Node.js) with production experience in healthcare, retail, and iGaming, specializing in real-time state management and simulation tooling. Seeking a backend or full-stack role in an English-speaking team.

WORK EXPERIENCE

iGaming startup (confidential), remote – Backend Engineer
Oct 2025 – Sep 2026

- Built a game management service that loads and removes games at runtime, reloads configuration without a restart (Redis pub/sub), drains sessions safely (Redis counters, pause flag), and guards admin changes with fencing tokens. Load-tested on four instances behind NGINX.
- Designed a typed game library (TypeScript generics, monorepo) so the live server and a separate simulation service run identical game logic.
- Built a simulation engine: configuration math checks, parallel stability analysis (worker threads) and player-type session modelling, with configurable acceptance rules for domain experts.

Swan Technology, Dubai, UAE, remote – Full-Stack Developer
Oct 2023 – Oct 2025

- Built a lab management system (Next.js, SQLite/Prisma) replacing the lab's failed legacy software: patient records and history, doctor-configurable tests with reference thresholds, and printing of reports, invoices and envelopes. 450+ reports monthly, report preparation cut from 10 minutes to under 2.
- Wrote a custom A4 pagination engine (repeating headers, splittable test groups) and shipped on-premise releases with GitHub Actions, automated updates and a health-checked rollback.
- Also built a React Native storefront on Shopify's GraphQL API, and the permission system (Unix-style users and groups) for a Laravel document-routing app for a university.

Self-Employed, Hama, Syria – Software Developer
Jan 2020 – Oct 2023

- **Restaurant POS & Inventory System** (Laravel/React): Point-of-sale, inventory and automated financial reporting, replacing a 1-hour manual reconciliation with a process under 5 minutes. In production for 3+ years.
- **Dental Clinic Management System** (React/Node.js/TypeScript): Patient records for 50+ monthly visits, treatment tracking, X-ray storage and a custom interactive tooth chart. In production for 2 years.

SKILLS

Languages: TypeScript, JavaScript, PHP, Python, SQL

Backend: Node.js, Express.js, Laravel, Prisma, Redis, REST, GraphQL

Frontend: React, Next.js, React Native, Tailwind CSS

Testing & Tools: Jest, Vitest, Cypress, Git, CI/CD

EDUCATION

Al-Hawash Private University
B.Sc. in Informatics Engineering
2018 – 2023 (coursework)

Degree conferred Jul 2024
Grade: Excellent (GPA 3.48/4.0)

Graduation project: face-recognition attendance system (Laravel, React, Python)

CERTIFICATES

Deep Learning Specialization – DeepLearning.AI, Coursera

IBM Introduction to Networking & Storage – IBM, Coursera

LANGUAGES

Arabic: Native

English: Fluent (C1)

German: Beginner (A1)
